Donors choose data analysis

Table of contents

Little History about Data Set

Founded in 2000 by a high school teacher in the Bronx, DonorsChoose.org empowers public school teachers from across the country to request much-needed materials and experiences for their students. At any given time, there are thousands of classroom requests that can be brought to life with a gift of any amount.

Answers to What and Why Questions on Data Set

DonorsChoose.org receives hundreds of thousands of project proposals each year for classroom projects in need of funding. Right now, a large number of volunteers is needed to manually screen each submission before it's approved to be posted on the DonorsChoose.org website.

Next year, DonorsChoose.org expects to receive close to 500,000 project proposals. As a result, there are three main problems they need to solve:

- How to scale current manual processes and resources to screen 500,000 projects so that they can be posted as quickly and as efficiently as possible
- How to increase the consistency of project vetting across different volunteers to improve the experience for teachers
- How to focus volunteer time on the applications that need the most assistance

The goal of the competition is to predict whether or not a DonorsChoose.org project proposal submitted by a teacher will be approved, using the text of project descriptions as well as additional metadata about the project, teacher, and school. DonorsChoose.org can then use this information to identify projects most likely to need further review before approval.

About the DonorsChoose Data Set

The `train.csv` data set provided by DonorsChoose contains the following features:

Feature	Description
`project_id`	A unique identifier for the proposed p **Example:** `p036502`
`project_title`	Title of the project. **Examples:** • `Art Will Make You Happy` • `First Grade Fun`

Feature	Description
`project_grade_category`	Grade level of students for which the project is targeted. One of the follow enumerated values: • `Grades PreK-2` • `Grades 3-5` • `Grades 6-8` • `Grades 9-12`
`project_subject_categories`	One or more (comma-separated) su categories for the project from the fo enumerated list of values: • `Applied Learning` • `Care & Hunger` • `Health & Sports` • `History & Civics` • `Literacy & Language` • `Math & Science` • `Music & The Arts` • `Special Needs` • `Warmth` **Examples:** • `Music & The Arts` • `Literacy & Language, Ma & Science`
`school_state`	State where school is located (Two-l U.S. postal code). **Example:** `WY`

Feature	Description
project_subject_subcategories	One or more (comma-separated) su subcategories for the project. **Exam** • `Literacy` • `Literature & Writing, Social Sciences`
project_resource_summary	An explanation of the resources nee the project. **Example:** • `My students need hands literacy materials to manage sensory needs!`
project_essay_1	First application essay*
project_essay_2	Second application essay*
project_essay_3	Third application essay*
project_essay_4	Fourth application essay*
project_submitted_datetime	Datetime when project application w submitted. **Example:** `2016-04-28 12:43:56.245`
teacher_id	A unique identifier for the teacher of proposed project. **Example:** `bdf8baa8fedef6bfeec7ae4ff1c`

Feature	Description
`teacher_prefix`	Teacher's title. One of the following enumerated values: • `nan` • `Dr.` • `Mr.` • `Mrs.` • `Ms.` • `Teacher.`
`teacher_number_of_previously_posted_projects`	Number of project applications previ submitted by the same teacher. **Exa** 2

* See the section **Notes on the Essay Data** for more details about these features.

Additionally, the `resources.csv` data set provides more data about the resources required for each project. Each line in this file represents a resource required by a project:

Feature	Description
`id`	A `project_id` value from the `train.csv` file. **Example:** `p036502`
`description`	Desciption of the resource. **Example:** `Tenor Saxophone Reeds, Box of 25`
`quantity`	Quantity of the resource required. **Example:** 3
`price`	Price of the resource required. **Example:** `9.95`

Note: Many projects require multiple resources. The `id` value corresponds to a `project_id` in train.csv, so you use it as a key to retrieve all resources needed for a project:

The data set contains the following label (the value you will attempt to predict):

Label	Description
`project_is_approved`	A binary flag indicating whether DonorsChoose approved the project. A value of `0` indicates the project was not approved, and a value of 1 indicates the project was approved.

Notes on the Essay Data

Prior to May 17, 2016, the prompts for the essays were as follows:

- __project_essay_1:__ "Introduce us to your classroom"
- __project_essay_2:__ "Tell us more about your students"
- __project_essay_3:__ "Describe how your students will use the materials you're requesting"
- __project_essay_4:__ "Close by sharing why your project will make a difference"

Starting on May 17, 2016, the number of essays was reduced from 4 to 2, and the prompts for the first 2 essays were changed to the following:

- __project_essay_1:__ "Describe your students: What makes your students special? Specific details about their background, your neighborhood, and your school are all helpful."
- __project_essay_2:__ "About your project: How will these materials make a difference in your students' learning and improve their school lives?"

For all projects with project_submitted_datetime of 2016-05-17 and later, the values of project_essay_3 and project_essay_4 will be NaN.

Importing required libraries

In [1]:
```
import pandas as pd;
```

In [2]:
```
# numpy for easy numerical computations
```

```
import numpy as np
# pandas for dataframes and filterings

```

```
printStyle("Number of attributes in resources data: {}".format(resource
sData.shape[1]), color.BOLD);
```

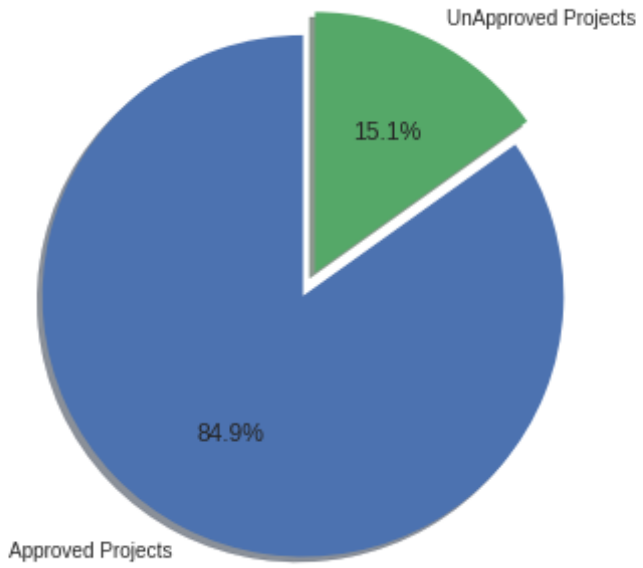
```
Number of data points in projects data: 109248
Number of attributes in projects data:17
============================================================
Number of data points in resources data: 1541272
Number of attributes in resources data: 4
```

Univariate data analysis

In [12]:

```
approvedProjects = projectsData[projectsData.project_is_approved == 1].
shape[0];
unApprovedProjects = projectsData[projectsData.project_is_approved == 0
].shape[0];
totalProjects = projectsData.shape[0];
print("Number of projects approved for funding: {}, ({})".format(approv
edProjects, (approvedProjects / totalProjects) * 100));
print("Number of projects not approved for funding: {}, ({})".format(un
ApprovedProjects, (unApprovedProjects / totalProjects) * 100));
# Pie chart representation
# Citation: https://matplotlib.org/gallery/pie_and_polar_charts/pie_fea
tures.html
labels = ["Approved Projects", "UnApproved Projects"];
explode = (0, 0.1);
sizes = [approvedProjects, unApprovedProjects];
figure, ax = plt.subplots();
ax.pie(sizes, labels = labels, explode = explode, autopct = '%1.1f%%',
shadow = True, startangle = 90);
ax.axis('equal');
plt.rcParams['figure.figsize'] = (7, 7);
plt.show();
```

```
Number of projects approved for funding: 92706, (84.85830404217927)
Number of projects not approved for funding: 16542, (15.14169595782073
9)
```



Observation:

1. There are more number of approved projects compared to rejected projects. So this is a imbalanced dataset.

Univariate Analysis : 'school_state'

Project proposal percentage in different states

In [13]:
```
groupedByStatesData = pd.DataFrame(projectsData.groupby(['school_state'
])['project_is_approved'].apply(np.mean)).reset_index();
groupedByStatesData.columns = ['state_code', 'number_of_proposals'];
groupedByStatesData = groupedByStatesData.sort_values(by=['number_of_pr
oposals'], ascending = True);
printStyle("5 States with lowest percentage of project approvals:", col
```

```
or.BOLD);
equalsBorder(60);
groupedByStatesData.head(5)
```

5 States with lowest percentage of project approvals:
==========

Out[13]:

	state_code	number_of_proposals
46	VT	0.800000
7	DC	0.802326
43	TX	0.813142
26	MT	0.816327
18	LA	0.831245

In [14]:
```
printStyle("5 states with highest percentage of project approvals: ", c
olor.BOLD);
equalsBorder(60);
groupedByStatesData.tail(5).iloc[::-1]
```

5 states with highest percentage of project approvals:
==========

Out[14]:

	state_code	number_of_proposals
8	DE	0.897959

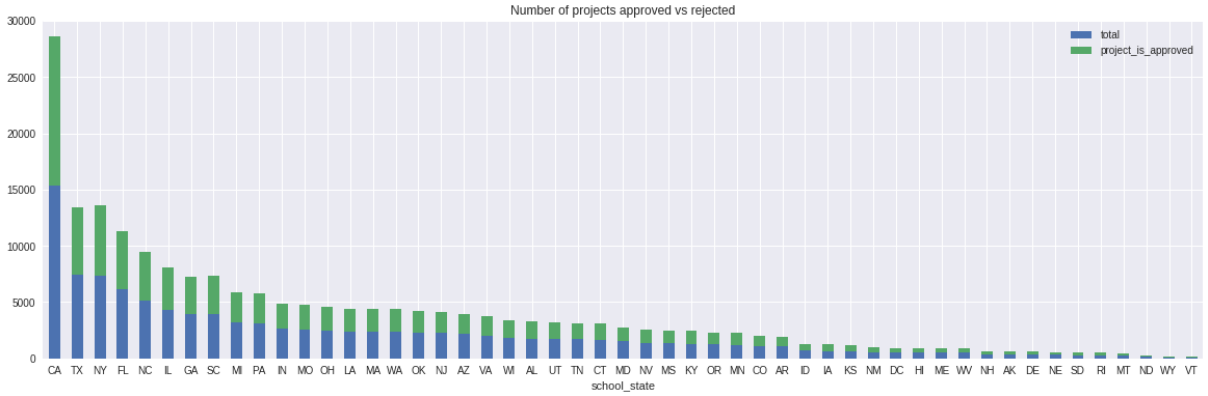
ate', 'project_is_approved', orientation = 'vertical');
printStyle("Top 5 states with high project proposals", color.BOLD)
equalsBorder(60);
statesCharacteristicsData.head(5)
```

Top 5 states with high project proposals
==========

Out[16]:

	school_state	project_is_approved	total	approval_rate
4	CA	13205	15388	0.858136
43	TX	6014	7396	0.813142

	school_state	project_is_approved	total	approval_rate
34	NY	6291	7318	0.859661
9	FL	5144	6185	0.831690
27	NC	4353	5091	0.855038



In [17]:
```
printStyle("Top 5 states with least project proposals", color.BOLD)
equalsBorder(60);
statesCharacteristicsData.tail(5)
```

Top 5 states with least project proposals
==========

Out[17]:

	school_state	project_is_approved	total	approval_rate
39	RI	243	285	0.852632
26	MT	200	245	0.816327
28	ND	127	143	0.888112
50	WY	82	98	0.836735
46	VT	64	80	0.800000

Observation:

1. Highest number of project proposals are from CA(California) and it was almost about 16000 projects
2. Every state has more than 80% approval rate.

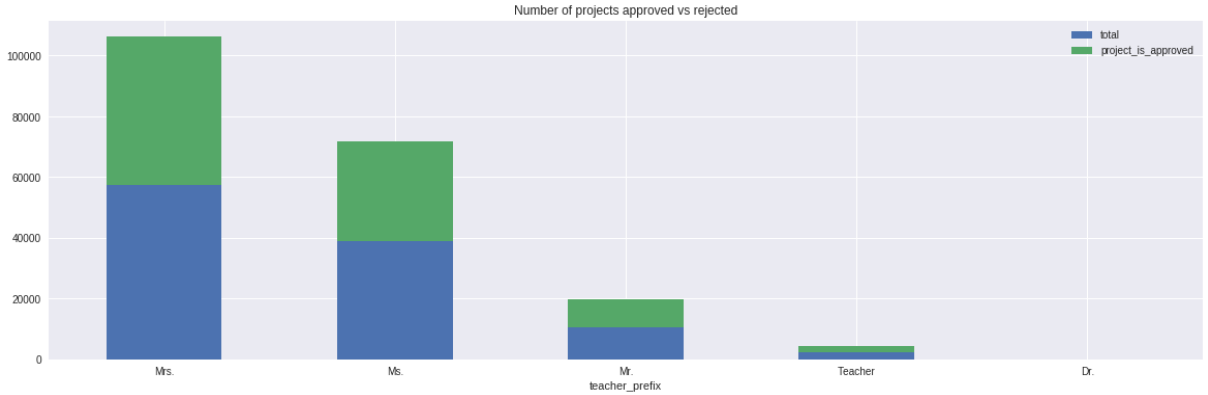
Univariate Analysis: teacher_prefix

In [18]:
```
teacherPrefixCharacteristicsData = univariateBarPlots(projectsData, 'teacher_prefix', 'project_is_approved', orientation = 'vertical', plot = True);
printStyle("Project proposals characteristics based on types of persons", color.BOLD);
equalsBorder(60);
teacherPrefixCharacteristicsData
```

```
Project proposals characteristics based on types of persons
============================================================
```

Out[18]:

	teacher_prefix	project_is_approved	total	approval_rate
2	Mrs.	48997	57269	0.855559
3	Ms.	32860	38955	0.843537
1	Mr.	8960	10648	0.841473
4	Teacher	1877	2360	0.795339
0	Dr.	9	13	0.692308



Observataion:

1. When compared to others Dr.'s have proposed very less number of projects.
2. Women have proposed more number of projects than men.

Univariate Analysis: project_grade

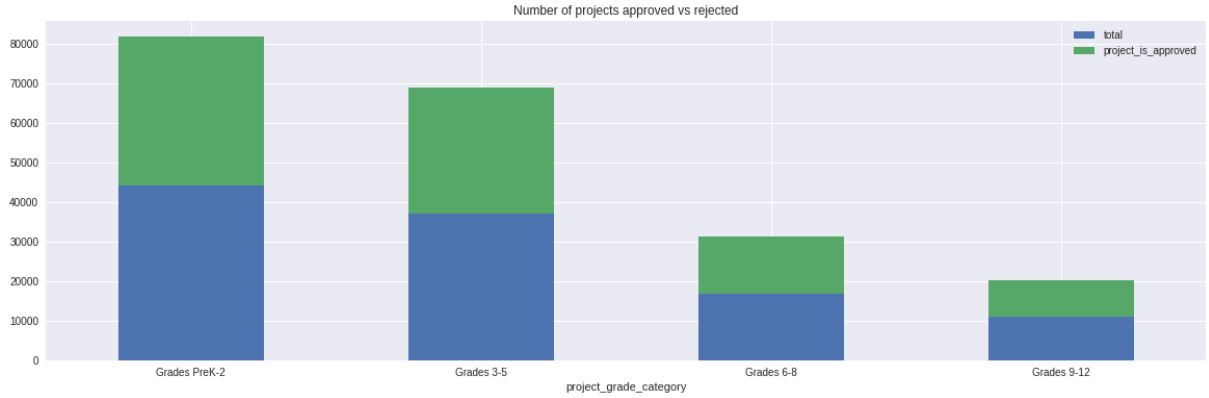
In [19]:
```
gradeCharacteristicsData = univariateBarPlots(projectsData, 'project_grade_category', 'project_is_approved', orientation = 'vertical', plot = True);
printStyle("Project proposal characteristics based on grades", color.BOLD);
equalsBorder(60);
gradeCharacteristicsData
```

Project proposal characteristics based on grades
==========

Out[19]:

	project_grade_category	project_is_approved	total	approval_rate
3	Grades PreK-2	37536	44225	0.848751
0	Grades 3-5	31729	37137	0.854377

	project_grade_category	project_is_approved	total	approval_rate
1	Grades 6-8	14258	16923	0.842522
2	Grades 9-12	9183	10963	0.837636



Observation:

1. Most number of projects proposed are for students less than grade-5 (for primary school students) which means that children are being taught with project oriented teaching which is great.

Univariate Analysis: project_subject_categories

In [0]:
```

Observation:

1. There are more number of subject subcategories than subject categories.
2. Even more number of projects proposed belong to multiple subject sub categories.

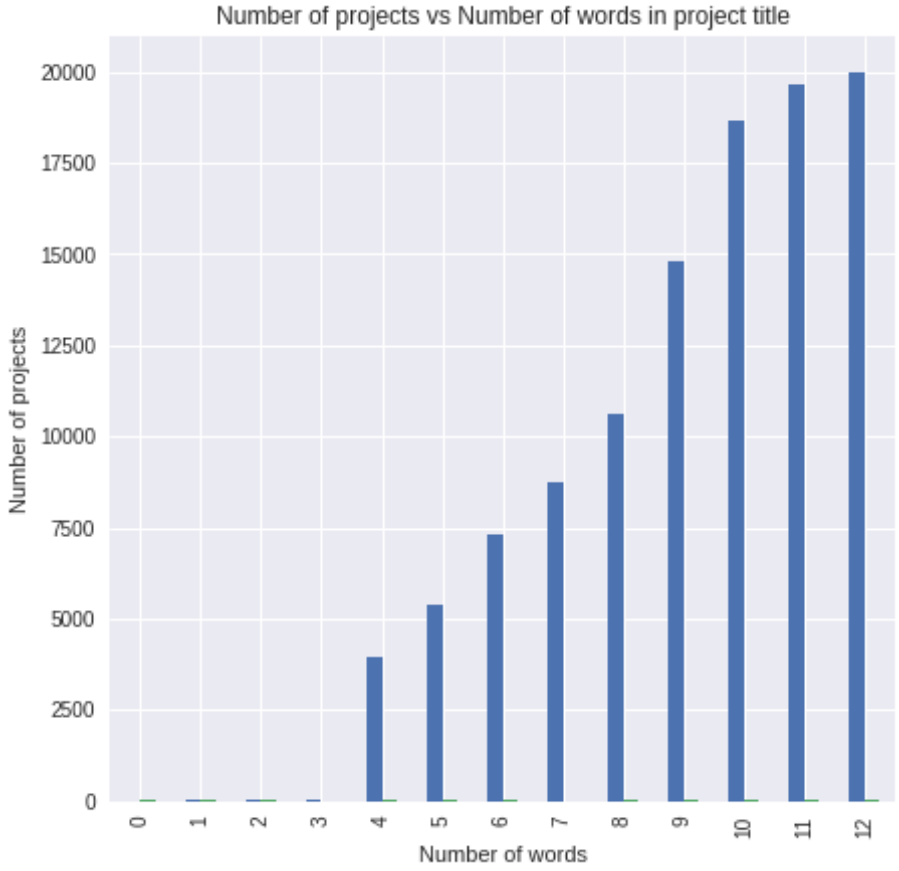
Univariate Analysis : project_title

In [31]:
```
#How to calculate number of words in a string in DataFrame: https://sta
ckoverflow.com/a/37483537/4084039
wordCounts = projectsData['project_title'].str.split().apply(len).value
_counts();
dictionaryWordCounts = dict(wordCounts);
dictionaryWordCounts = dict(sorted(dictionaryWordCounts.items(), key =
lambda kv: kv[1]));
wordCountsData = pd.DataFrame.from_dict({'number_of_words': list(dictio
naryWordCounts.keys()), 'number_of_projects': list(dictionaryWordCounts
.values())}).sort_values(by = ['number_of_projects']);
wordCountsData.plot(kind = 'bar', title = "Number of projects vs Number
 of words in project title", legend = False);
plt.xlabel('Number of words');
plt.ylabel('Number of projects');
wordCountsData
```

Out[31]:

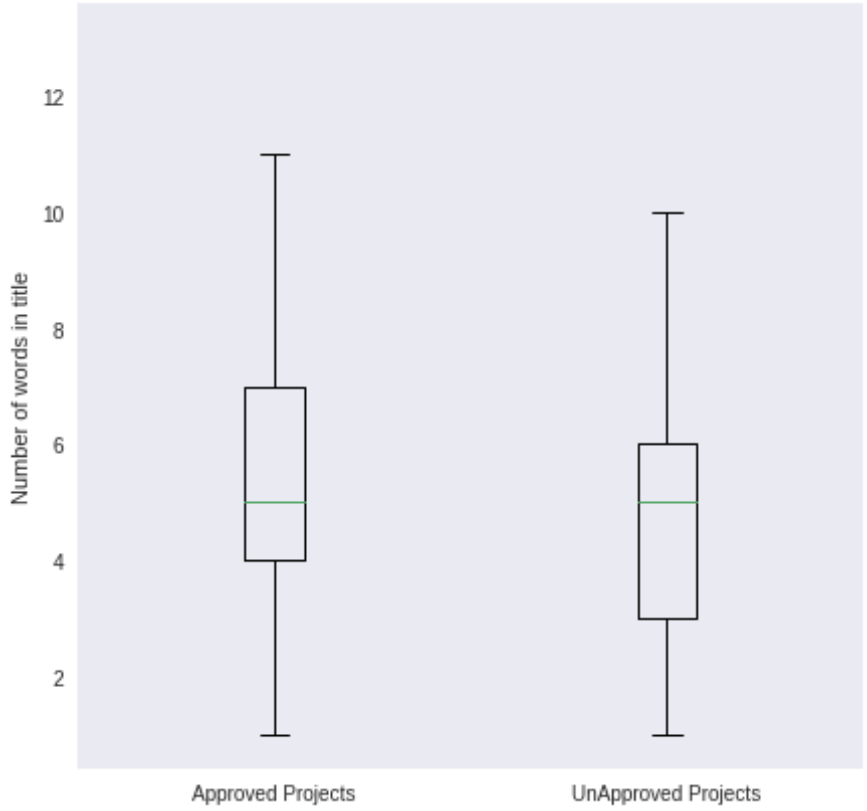
	number_of_projects	number_of_words
0	1	13
1	11	12
2	30	11
3	31	1
4	3968	10
5	5383	9
6	7289	8
7	8733	2
8	10631	7
9	14824	6
10	18691	3

	number_of_projects	number_of_words
11	19677	5
12	19979	4

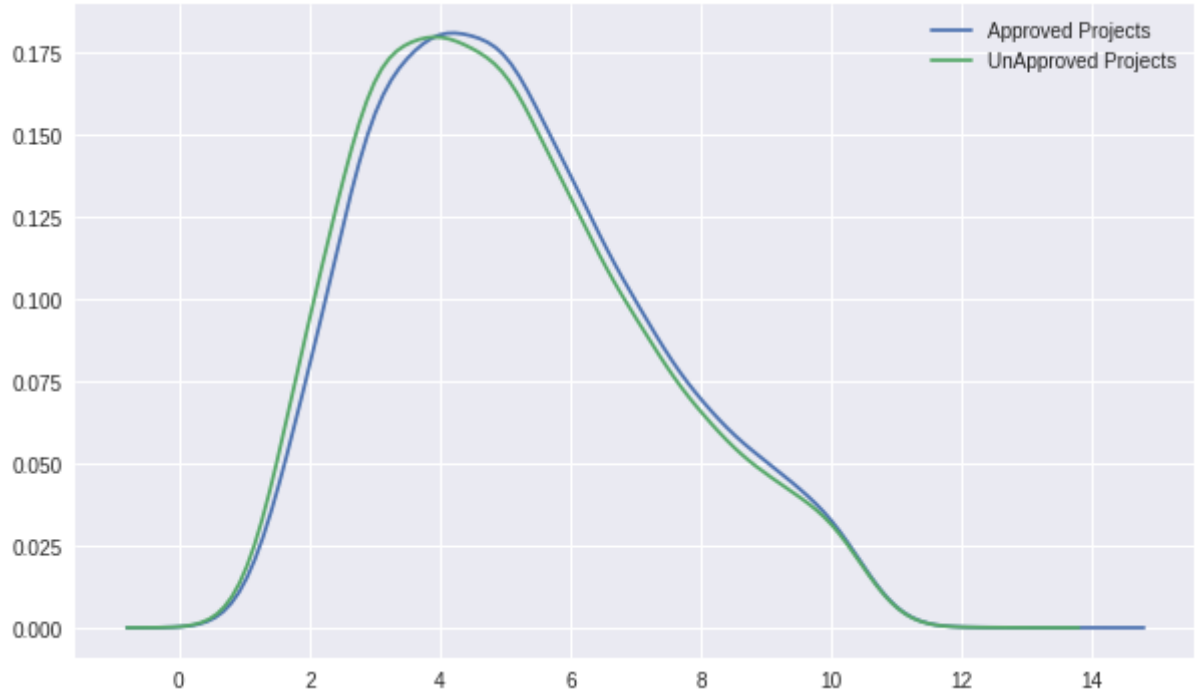


In [32]:
```
approvedNumberOfProjects = projectsData[projectsData.project_is_approve
d == 1]['project_title'].str.split().apply(len);
approvedNumberOfProjects = approvedNumberOfProjects.values
unApprovedNumberOfProjects = projectsData[projectsData.project_is_appro
ved == 0]['project_title'].str.split().apply(len);
unApprovedNumberOfProjects = unApprovedNumberOfProjects.values
```

```
plt.boxplot([approvedNumberOfProjects, unApprovedNumberOfProjects]);
plt.grid();
plt.xticks([1, 2], ['Approved Projects', 'UnApproved Projects']);
plt.ylabel('Number of words in title');
plt.show();
```



In [33]:
```
plt.figure(figsize = (10, 6));
sbrn.kdeplot(approvedNumberOfProjects, label = "Approved Projects", bw
= 0.6);
sbrn.kdeplot(unApprovedNumberOfProjects, label = "UnApproved Projects",
 bw = 0.6);
plt.legend();
plt.show();
```



Observations:

1. Most of the approved projects have between 4 to 8 number of words in their project_title.
2. Most of the rejected projects have between 3 to 6 number of words in their project_title.

Univariate Analysis: project_essay_1,2,3,4

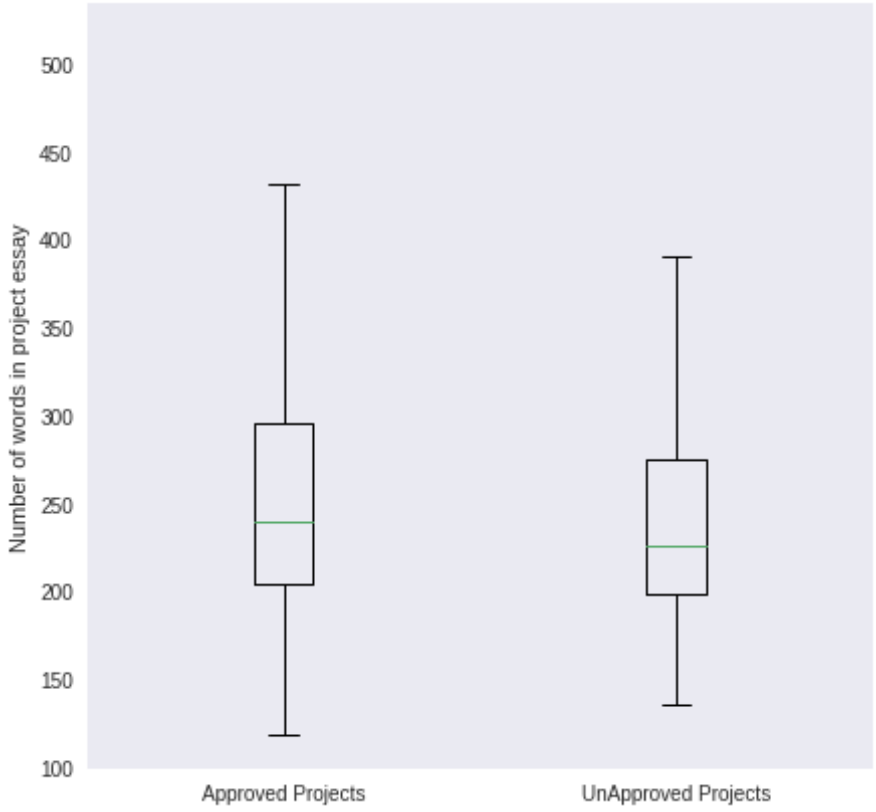
In [34]:
```
projectsData['project_essay'] = projectsData['project_essay_1'].map(str
) + projectsData['project_essay_2'].map(str) + \
                                projectsData['project_essay_3'].map(str
) + projectsData['project_essay_4'].map(str);
projectsData.head(5)
```

Out[34]:

	Unnamed: 0	id	teacher_id	teacher_prefix	school_state
0	160221	p253737	c90749f5d961ff158d4b4d1e7dc665fc	Mrs.	IN
1	140945	p258326	897464ce9ddc600bced1151f324dd63a	Mr.	FL
2	21895	p182444	3465aaf82da834c0582ebd0ef8040ca0	Ms.	AZ
3	45	p246581	f3cb9bffbba169bef1a77b243e620b60	Mrs.	KY
4	172407	p104768	be1f7507a41f8479dc06f047086a39ec	Mrs.	TX

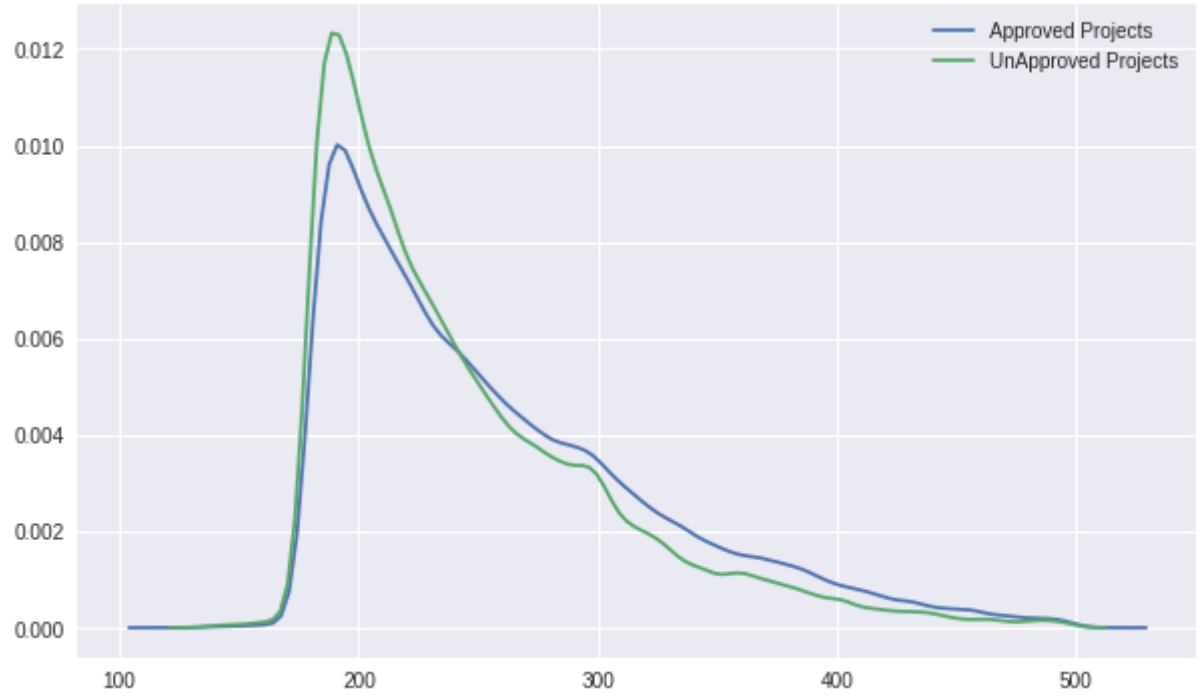
In [35]:
```
approvedNumberOfProjects = projectsData[projectsData.project_is_approve
d == 1]['project_essay'].str.split().apply(len);
approvedNumberOfProjects = approvedNumberOfProjects.values
unApprovedNumberOfProjects = projectsData[projectsData.project_is_appro
```

```
ved == 0]['project_essay'].str.split().apply(len);
unApprovedNumberOfProjects = unApprovedNumberOfProjects.values
plt.boxplot([approvedNumberOfProjects, unApprovedNumberOfProjects]);
plt.grid();
plt.xticks([1, 2], ['Approved Projects', 'UnApproved Projects']);
plt.ylabel('Number of words in project essay');
plt.show();
```



In [36]:
```
plt.figure(figsize = (10, 6));
sbrn.kdeplot(approvedNumberOfProjects, label = "Approved Projects", bw
= 5);
sbrn.kdeplot(unApprovedNumberOfProjects, label = "UnApproved Projects",
 bw = 5);
```

```
plt.legend();
plt.show();
```



Observation:

1. The approved and rejected projects overlap largely when plotted based on number of words in project_essay. So we cannot predict any observation which will be useful for classification.

Univariate Analysis: price

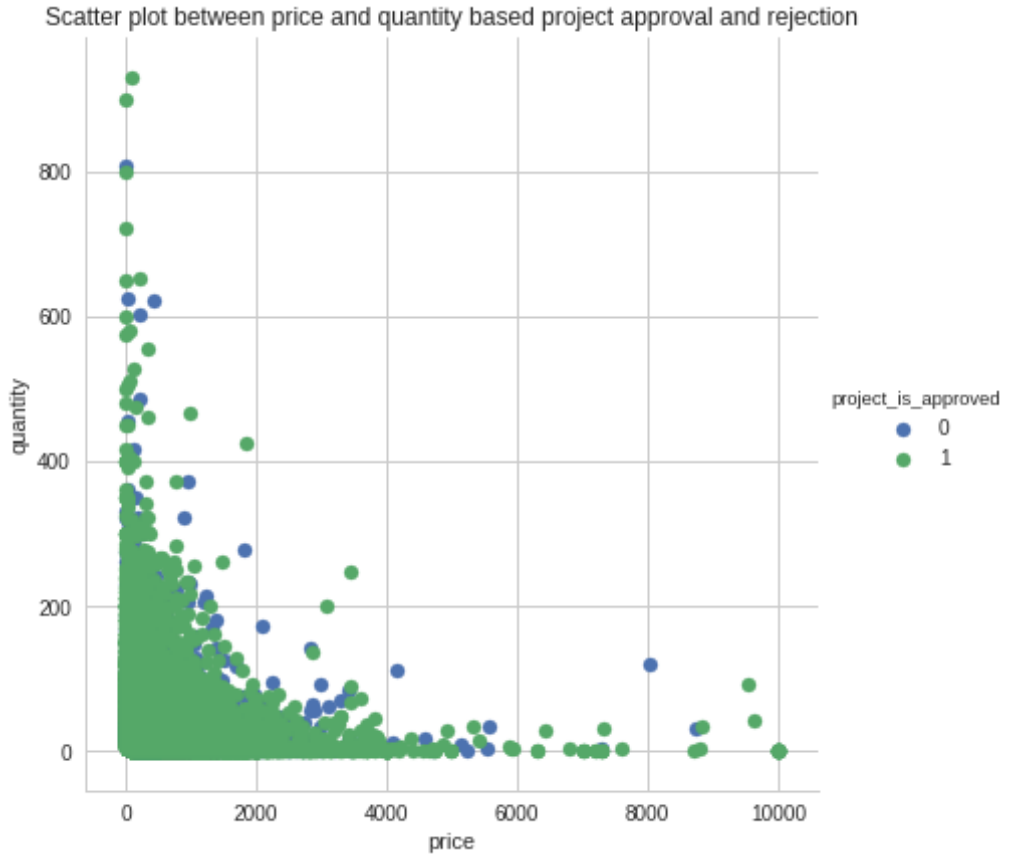
Quantity, percentile), 3) for percentile in np.arange(0, 100, 5)];
percentileValueQuantitiesData = pd.DataFrame({'Percentile': np.arange(0
, 100, 5), 'Approved projects': quantityPercentilesApproved, 'UnApprove
d Projects': quantityPercentilesUnApproved});
percentileValueQuantitiesData
```

Out[49]:

	Approved projects	Percentile	UnApproved Projects
0	1.0	0	1.0
1	1.0	5	2.0
2	1.0	10	3.0
3	2.0	15	4.0
4	3.0	20	5.0
5	3.0	25	6.0
6	4.0	30	7.0
7	5.0	35	8.0
8	6.0	40	9.0
9	7.0	45	10.0
10	8.0	50	12.0
11	10.0	55	13.0
12	11.0	60	15.0
13	14.0	65	18.0
14	16.0	70	20.0
15	20.0	75	24.0
16	25.0	80	29.0
17	30.0	85	35.0
18	38.0	90	45.0
19	56.0	95	63.0

In [50]:
```
sbrn.set_style('whitegrid');
```

```
sbrn.FacetGrid(projectsData, hue = 'project_is_approved', size = 6) \
    .map(plt.scatter, 'price', 'quantity') \
    .add_legend();
plt.title("Scatter plot between price and quantity based project approv
al and rejection");
plt.show();
```



Observation:

1. When plotted scatter plot between approved and rejected projects based on price and quantity there is huge overlap. So the projects approval is not actually depending on

price and quantity resources of the project.

Univariate Analysis: teacher_number_of_previously_posted_projects

In [51]:
```
projectsData.head(5)
```

Out[51]:

	Unnamed: 0	id	teacher_id	teacher_prefix	school_state

 previouslyPostedApprovedNumberData['project_is_approved'].sum());
print("Number of projects rejected categorized by previously_posted: ",
 previouslyPostedRejectedNumberData['project_is_approved'].sum());
previouslyPostedNumberData = pd.merge(previouslyPostedApprovedNumberDat
a, previouslyPostedRejectedNumberData, on = 'teacher_number_of_previous
ly_posted_projects', how = 'inner');
previouslyPostedNumberData.head(5)
```

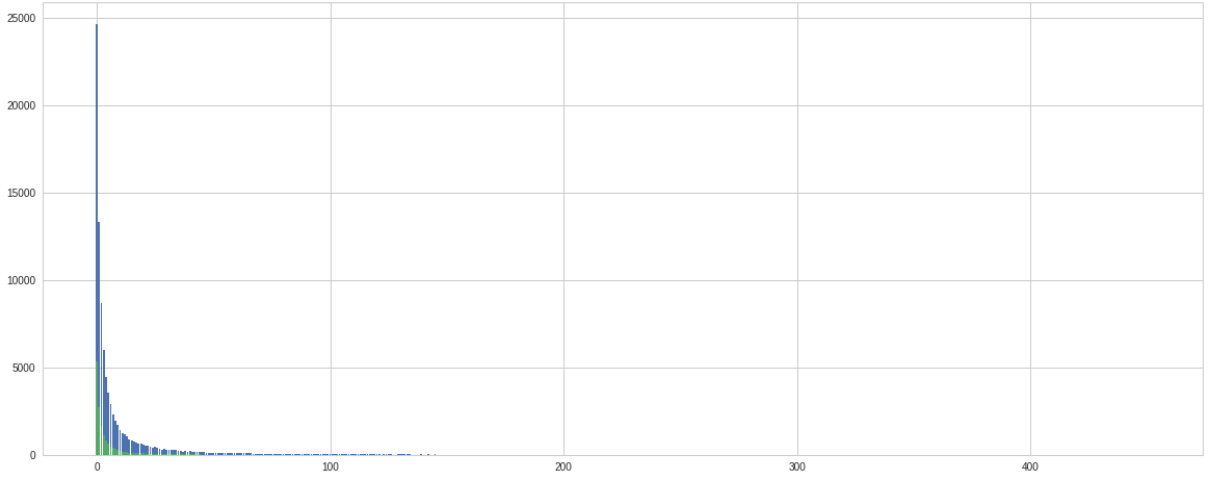
```
Total number of projects approved:  92706
Total number of projects rejected:  16542
Number of projects approved categorized by previously_posted:  92706
Number of projects rejected categorized by previously_posted:  16542
```

Out[52]:

	teacher_number_of_previously_posted_projects	project_is_approved_x	project_is_ap

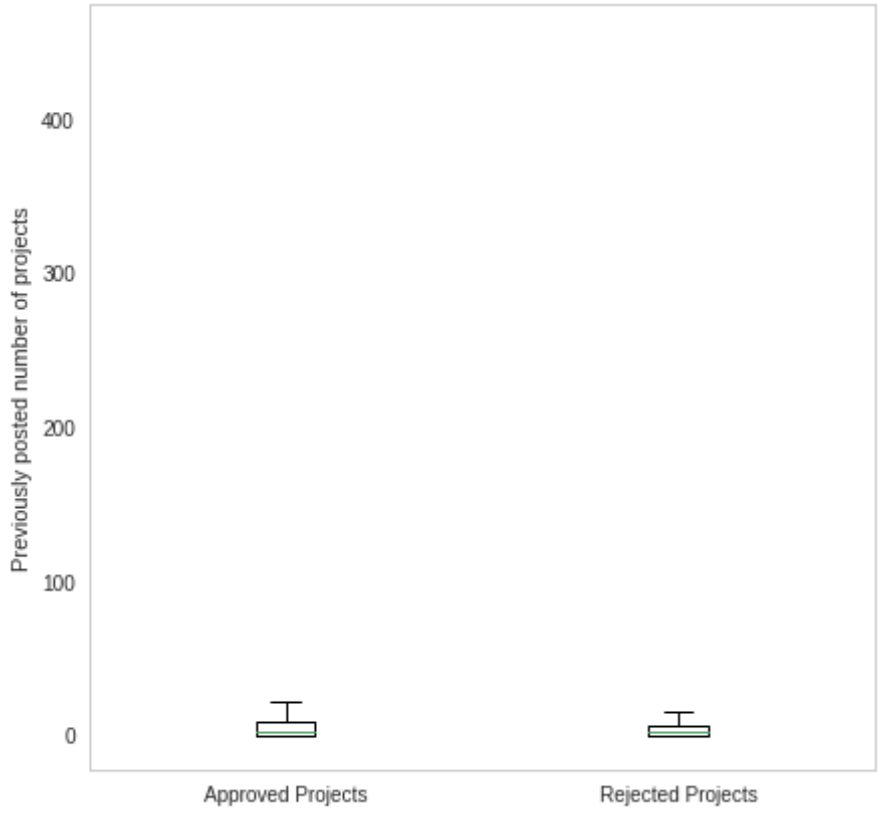
	teacher_number_of_previously_posted_projects	project_is_approved_x	project_is_ap
0	0	24652	5362
1	1	13329	2729
2	2	8705	1645
3	3	5997	1113
4	4	4452	814

In [53]:
```
plt.figure(figsize = (20, 8));
plt.bar(previouslyPostedNumberData.teacher_number_of_previously_posted_
projects, previouslyPostedNumberData.project_is_approved_x);
plt.bar(previouslyPostedNumberData.teacher_number_of_previously_posted_
projects, previouslyPostedNumberData.project_is_approved_y);
plt.show();
```

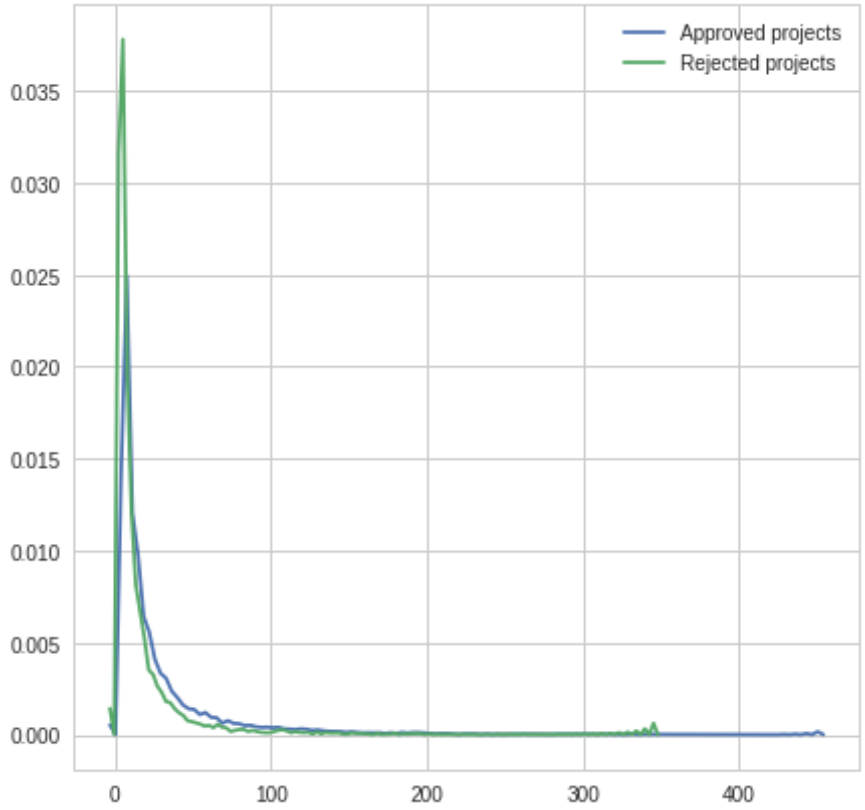


In [54]:
```
previouslyPostedApprovedData = projectsData[projectsData['project_is_ap
proved'] == 1].teacher_number_of_previously_posted_projects;
previouslyPostedRejectedData = projectsData[projectsData['project_is_ap
proved'] == 0].teacher_number_of_previously_posted_projects;
```

```
plt.boxplot([previouslyPostedApprovedData, previouslyPostedRejectedData
]);
plt.grid();
plt.xticks([1, 2], ['Approved Projects', 'Rejected Projects']);
plt.ylabel('Previously posted number of projects');
plt.show();
```



In [55]:
```
sbrn.kdeplot(previouslyPostedApprovedData, label = "Approved projects",
 bw = 1);
sbrn.kdeplot(previouslyPostedRejectedData, label = "Rejected projects",
 bw = 1);
plt.show();
```



Observation:

1. Most of the projects approved and rejected are with less number of teacher_number_of_previously_posted_projects. So the approval is not much depending on how many number of projects proposed by teacher previously.

In [0]:
```
def stringContainsNumbers(string):
    return any([character.isdigit() for character in string])
```

In [57]:

print("Number of approved projects with numbers in resource summary: ",
 numericResourceApprovedData.shape[0]);
print("Number of rejected projects with numbers in resource summary: ",
 numericResourceRejectedData.shape[0]);
print("Number of approved projects without numbers in resource summary:
 ", textResourceApprovedData.shape[0]);
print("Number of rejected projects without numbers in resource summary:
 ", textResourceRejectedData.shape[0]);
```

```
Checking whether numbers in resource summary will be useful for project
approval?
======================================================================
Number of approved projects with numbers in resource summary:  14090
Number of rejected projects with numbers in resource summary:  1666
Number of approved projects without numbers in resource summary:  78616
Number of rejected projects without numbers in resource summary:  14876
```

Observation:

1. The rejection rate of project is less when projects resource summary has numbers in it.
2. Even the number of projects approved without numbers in resource summary is high which means that the classification does not actually depends on whether resource summary contains numerical digits or not.

Conclusion of univariate analysis:

1. There is huge overlap of approved and rejected projects when taken for all single featurs. So, this project cannot be classified using single features.
2. project_title is some what better in text type of feature because of less overlap than others.
3. The project approval is not depending on resources cost, but the probability of project rejection is more when resources cost is more.

Preprocessing data

======================================================================
['My students are English learners that are working on English as their
second or third languages. We are a melting pot of refugees, immigrant
s, and native-born Americans bringing the gift of language to our schoo
l. \\r\\n\\r\\n We have over 24 languages represented in our English Le
arner program with students at every level of mastery.  We also have ov
er 40 countries represented with the families within our school.  Each
student brings a wealth of knowledge and experiences to us that open ou
r eyes to new cultures, beliefs, and respect.\\"The limits of your lang
uage are the limits of your world.\\"-Ludwig Wittgenstein  Our English
learner\'s have a strong support system at home that begs for more reso
urces.  Many times our parents are learning to read and speak English a
long side of their children.  Sometimes this creates barriers for paren
ts to be able to help their child learn phonetics, letter recognition,
and other reading skills.\\r\\n\\r\\nBy providing these dvd\'s and play
ers, students are able to continue their mastery of the English languag
e even if no one at home is able to assist.  All families with students
within the Level 1 proficiency status, will be a offered to be a part o
f this program.  These educational videos will be specially chosen by t
he English Learner Teacher and will be sent home regularly to watch.  T
he videos are to help the child develop early reading skills.\\r\\n\\r
\\nParents that do not have access to a dvd player will have the opport
unity to check out a dvd player to use for the year.  The plan is to us
e these videos and educational dvd\'s for the years to come for other E
L students.\\r\\nnannan']

21	quantity

Useful features:

Here we will consider only below features for classification and we can ignore the other features

Categorical data:

1. **school_state** - categorical data
2. **project_grade_category** - categorical data
3. **cleaned_categories** - categorical data
4. **cleaned_sub_categories** - categorical data
5. **teacher_prefix** - categorical data

Text data:

1. **project_resource_summary** - text data
2. **project_title - text data**
3. **project_resource_summary** - text data

Numerical data:

1. **teacher_number_of_previously_posted_projects** - numerical data
2. **price** - numerical data
3. **quantity** - numerical data

Vectorizing categorical data

1. Vectorizing cleaned_categories(project_subject_categories cleaned) - One Hot Encoding

In [0]:
```
# Using CountVectorizer for performing one-hot-encoding by setting voca
bulary as list of all unique cleaned_categories
subjectsCategoriesVectorizer = CountVectorizer(vocabulary = list(sorted
CategoriesDictionary.keys()), lowercase = False, binary = True);
# Fitting CountVectorizer with cleaned_categories values
```

```
subjectsCategoriesVectorizer.fit(projectsData['cleaned_categories'].val
ues);
# Vectorizing categories using one-hot-encoding
categoriesVectors = subjectsCategoriesVectorizer.transform(projectsData
['cleaned_categories'].values);
```

In [0]:
```
print("Features used in vectorizing categories: ");
equalsBorder(70);
print(subjectsCategoriesVectorizer.get_feature_names());
equalsBorder(70);
print("Shape of cleaned_categories matrix after vectorization(one-hot-e
ncoding): ", categoriesVectors.shape);
equalsBorder(70);
print("Sample vectors of categories: ");
equalsBorder(70);
print(categoriesVectors[0:4])
```

```
Features used in vectorizing categories:
======================================================================
['Warmth', 'Care_Hunger', 'History_Civics', 'Music_Arts', 'AppliedLearn
ing', 'SpecialNeeds', 'Health_Sports', 'Math_Science', 'Literacy_Langua
ge']
======================================================================
Shape of cleaned_categories matrix after vectorization(one-hot-encodin
g):  (109248, 9)
======================================================================
Sample vectors of categories:
======================================================================
  (0, 8)        1
  (1, 2)        1
  (1, 6)        1
  (2, 6)        1
  (3, 7)        1
  (3, 8)        1
```

2. Vectorizing cleaned_sub_categories(project_subject_sub_categories cleaned) - One Hot Encoding

In [0]:
```
# Using CountVectorizer for performing one-hot-encoding by setting voca
bulary as list of all unique cleaned_sub_categories
subjectsSubCategoriesVectorizer = CountVectorizer(vocabulary = list(sor
tedDictionarySubCategories.keys()), lowercase = False, binary = True);
# Fitting CountVectorizer with cleaned_sub_categories values
subjectsSubCategoriesVectorizer.fit(projectsData['cleaned_sub_categorie
s'].values);
# Vectorizing sub categories using one-hot-encoding
subCategoriesVectors = subjectsSubCategoriesVectorizer.transform(projec
tsData['cleaned_sub_categories'].values);
```

In [0]:
```
print("Features used in vectorizing subject sub categories: ");
equalsBorder(70);
print(subjectsSubCategoriesVectorizer.get_feature_names());

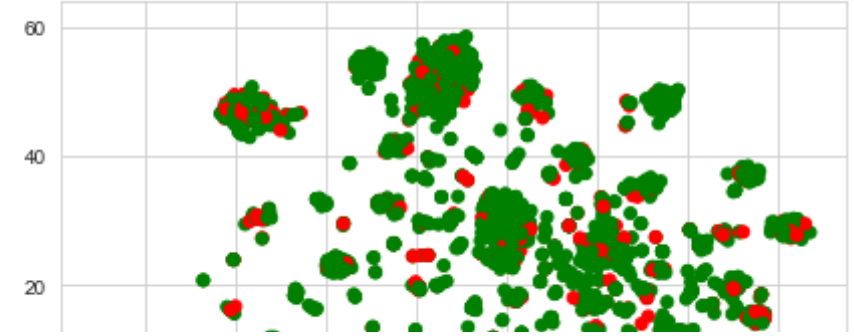
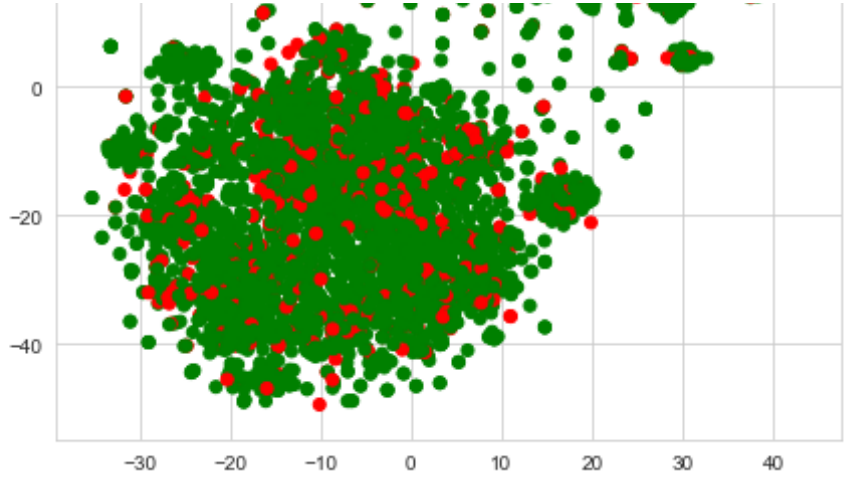
TSNE plot for merged data of all vectorized features and Categorical, Numerical features - Perplexity(100)





Conclusion about data visualization using t-sne:

1. Bag of Words, Tf-Idf are better than word2vec vectorizations because of forming some small group of clusters with less overlap of overall data when compared to others.
2. Higher perplexity values seems better in data visualization because of less overlap of data than others.
3. None of the techniques are useful for classification because of huge overlap of data.
4. It is not seperable problem in 2-dimensions but it may be seperable in higher dimensions.

Classification & Modelling using K-NN(With 50,000 data points)

Classification of data using K-NN(k-fold cross validation)

Splitting Data(Only training and test)

In [63]:
```
projectsData = projectsData.dropna(subset = ['teacher_prefix']);
projectsData.shape
```

Out[63]:
```
(109245, 22)
```

In [64]:
```
classesData = projectsData['project_is_approved']
print(classesData.shape)
```

```
(109245,)
```

In [0]:
```
trainingData, testData, classesTraining, classesTest = model_selection.
train_test_split(projectsData[0:50000], classesData[0:50000], test_size
 =  0.3, random_state = 0, stratify = classesData[0:50000]);
```

print("trainingData shape: ", trainingData.shape);
print("classesTraining shape: ", classesTraining.shape);
```

```
Shapes of splitted data:
======================================================================
testData shape:  (15000, 22)
classesTest:  (15000,)
trainingData shape:  (35000, 22)
classesTraining shape:  (35000,)
```

In [67]:
```
print("Number of negative points: ", trainingData[trainingData['project
_is_approved'] == 0].shape);
print("Number of positive points: ", trainingData[trainingData['project
_is_approved'] == 1].shape);
```

```
Number of negative points:  (5400, 22)
Number of positive points:  (29600, 22)
```

Balancing Data

Note: Instead of displaying whole vectorization process for balanced and imbalanced data, we have simply disabled below cell while performing analysis on imbalanced data and enabled while performing analysis on balanced data

In [130]:
```
negativeData = trainingData[trainingData['project_is_approved'] == 0];
positiveData = trainingData[trainingData['project_is_approved'] == 1];
negativeDataBalanced = resample(negativeData, replace = True, n_samples
 = 29600, random_state = 44);
trainingData = pd.concat([positiveData, negativeDataBalanced]);
trainingData = shuffle(trainingData);
classesTraining = trainingData['project_is_approved'];
print("Testing whether data is balanced: ");
equalsBorder(60);
print("Number of positive points: ", trainingData[trainingData['project
_is_approved'] == 1].shape);
print("Number of negative points: ", trainingData[trainingData['project
_is_approved'] == 0].shape);
```

```
Testing whether data is balanced:
============================================================
Number of positive points:  (29600, 22)
Number of negative points:  (29600, 22)
```

Vectorizing categorical data

1. Vectorizing cleaned_categories(project_subject_categories cleaned) - One Hot Encoding

Summarizing results of above analysis using K-NN

Results of analysis on imbalanced data when K-NN(k-fold cross validation) is used

In [8]:
```
kFoldResultsDataFrame
```

Out[8]:

	Vectorizer	Model	Hyper Parameter - K	AUC
0	Bag of words	Brute	39	0.618926
1	Tf-Idf	Brute	39	0.588769
2	Average Word2Vec	Brute	80	0.615863
3	Tf-Idf Weighted Word2Vec	Brute	80	0.629080

Results of analysis on imbalanced and balanced when K-NN(k-fold cross validation) with top 200 features

In [12]:
```
selectedFeaturesResultsDataFrame
```

Out[12]:

	Vectorizer	Model	Hyper Parameter - K	AUC
0	Tf-Idf	Brute	39	0.565629

	Vectorizer	Model	Hyper Parameter - K	AUC
1	Tf-Idf	Brute	1	0.522767

Conclusions of above analysis:

1. The best k-value by considering AUC values and difference between AUC value of cross-validate, test data will be 80 but the model trained with this k-value and imbalanced data is unable to predict the negative points and so it's like a dumb model.
2. While training with balanced data is able to predict negative and positive points considerably but with accuracy far less than training with imbalanced data.
3. It seems like K-NN cannot be used for solving the above problem if we want good prediction results.
